

Application Building

Build Python Code (Part 1)

```
from flask import Flask,render_template,request

from PIL import Image

import numpy as np

from tensorflow.keras.models import load_model

import tensorflow as tf

app = Flask(__name__)

@app.route('/')

def upload_file():

    return render_template('home.html')

@app.route('/about')

def upload_file1():

    return render_template('home.html')

@app.route('/upload')

def upload_file2():

    return render_template('predict.html')
```

```
@app.route('/predict',methods = ['POST'])
```
